Product designer with a background in cognitive science, computer science, and fine art helping experts make confident decisions via AI-powered products. Good design doesn't simplify; it reveals what was never complicated to begin with.

EXPERIENCE

Worthix (AI SaaS Startup) | Product Designer | Remote

August 2025 – Present

- Sole designer at a 15–20 person AI SaaS startup, working across product, systems, and visual identity from concept through engineering handoff
- Leading core platform experience (v2.1) redesign: reworking core user flows (datasource and hub creation) from wireframe to high-fidelity prototype, and overhauling the visual language to establish a cohesive brand feel
- Resolved critical UX gaps in v2.0, designing actionable states for stalled and incomplete workflows, including error recovery prompts and redesigned datasource cards to surface user progress and system status
- Designed two new products from scratch: Competitive Dashboard (benchmarking against industry competitors) and Churn/Score Dashboard (predicting customer churn and prioritizing retention), translating AI-generated predictions into clear, decision-ready interfaces for non-technical users
- Collaborate with the CEO along with engineering, product, and customer success teams to unify stakeholders, bridging technical constraints and user priorities
- Built a comprehensive design system with responsive light/dark modes in Figma and authored corresponding CSS theme files with primitive/token variables ensuring design-to-development consistency across products
- Developed a reusable Claude skill encoding brand and visual guidelines, distributed across the team to accelerate AI-assisted work by standardizing output without requiring designer review

EDUCATION

Wellesley College | Wellesley, MA, USA | Graduated May 2025

B.A. Cognitive & Linguistic Sciences, concentration in Psychology

B.A. Media Arts & Sciences, concentration in Computer Science

SKILLS

Design & Research: Figma, Wireframing, Prototyping, UI Design, UX Design, User Research, Usability Testing, Adobe Photoshop, Adobe Illustrator, Miro, Google Analytics

Development & Prototyping: HTML, CSS, JavaScript, Python, React, Framer, Git, Claude, Cursor, Loveable, Replit, Figma Make, Responsive Design

3D & Physical Design: Blender, Unity, C#, 3D Printing, Laser Cutting, 3D Modeling, 3D Scanning, Traditional media

RESEARCH & PROJECTS

TownH@ll (TownHall Civic Engagement Mobile App) | MAS Department, Wellesley College

May 2024 – July 2024

- Led 4-person team through end-to-end product design process: uncovered accessibility and engagement barriers through user interviews and competitive analysis, translating findings directly into wireframes and high-fidelity prototypes in Figma

3D Printed Custom Press-On Nails | Art & MAS Departments, Wellesley College

January 2025 – May 2025

- Identified poor fit of generic press-on nails; resolved via iterative 3D scanning, Blender modeling, and fabrication

Use Your Inside Voice | Psychology Department, Wellesley College

September 2024 – December 2024

- Designed, conducted, and documented priming study on how language shapes children's independent reasoning

ADDITIONAL

Spoken Languages: Native English & Portuguese, Proficient French & Spanish
